

Data Management

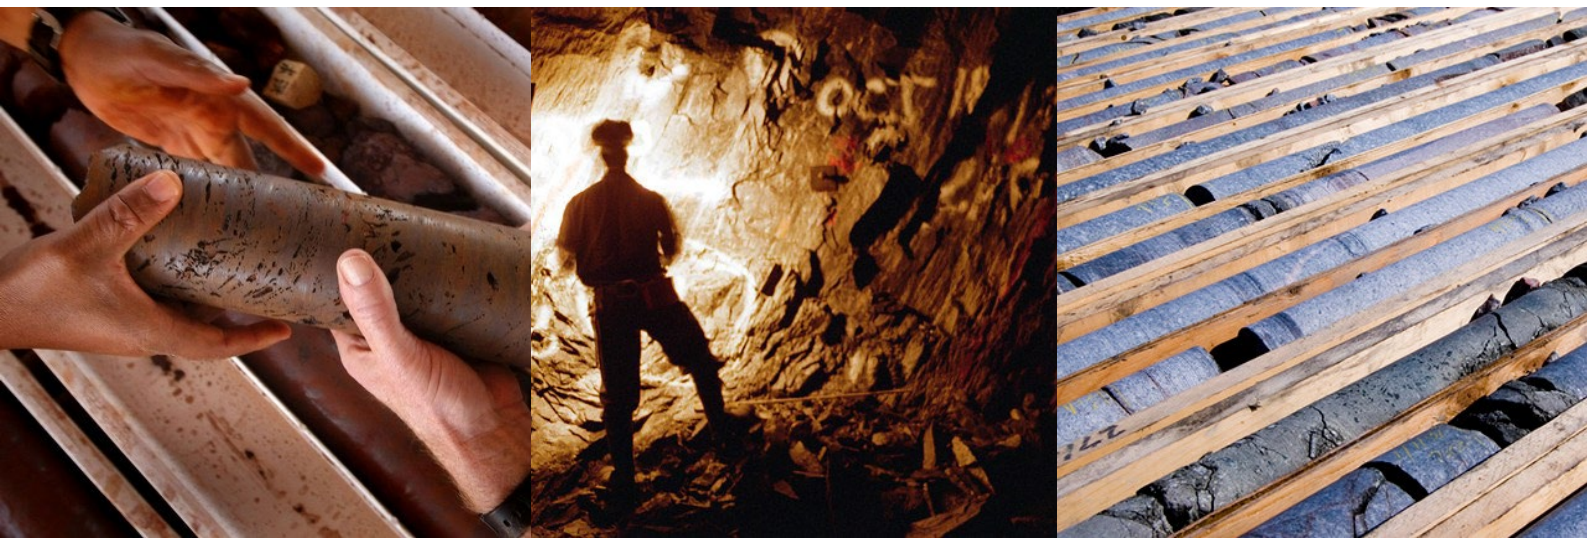

Practical and Professional Systems

The **GEORGE** Geological Data Management System from Nutava Mining is a data base designed to allow the recording, storing and retrieval of geological data obtained from drill holes, blast holes, face, wall and dump samples. In addition to this core functionality, **GEORGE** allows the geology team to capture costing data as drilling progresses, with a handy suite of reporting features.

The **GEORGE** QAQC system is a comprehensive QAQC system that sits on George 7 database. The **GEORGE** database produces Microsoft Excel results in a single work book that can be easily copied into reports as required. The **GEORGE** contracts management module is an invaluable aid during big drilling campaigns for reviewing and reporting on contract performance.

- Data validation
- Data entry template set-up
- Comprehensive lookup field management
- Drill costing management
- Reporting e.g. tenement activity, significant intercept reporting
- Comprehensive QAQC reporting
- Contracts Management
- Sample tracking

About Nutava Mining

Nutava Mining develops software solutions for the resources industry. We are a quality team of IT and mining professionals with years of experience in technology development.

Our Consulting team accelerate business transformation for clients, using technology as an enabler. We help businesses provide the right information to the right people at the right time. We take the time to discover the real issues and understand the true business objectives, bringing a pragmatic approach to each project.
