

Metallurgical Accounting

Practical and Professional Systems

MA:X from Nutava Mining is a solution for metallurgical accounting designed to allow the recording, storing and retrieval of mineral processing data, plant operation and availability data and is suitable for use across a wide range of commodities.

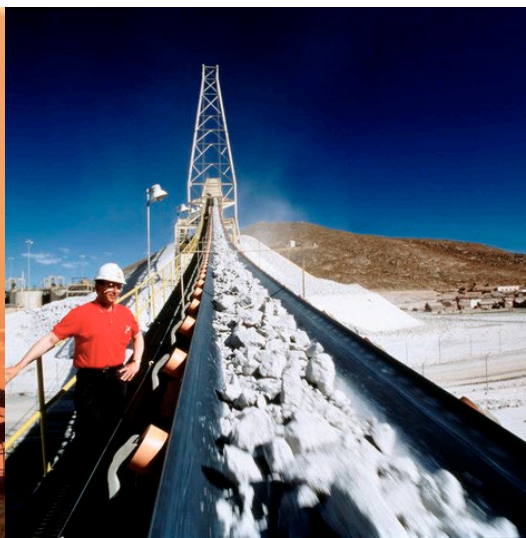

The system is designed to capture data from a variety of sources and store in one central location, removing the reliance on heavily customised and personalised spreadsheets. With inbuilt charting and reports, **MA:X** allows visual comparisons of key parameters, resulting in enhanced decision making.

Downtime accounting is incorporated by plant area and reason, with availability and utilisation being standard calculations. Similarly, reagent, media, water and power consumption measurements are accumulated for all standard daily or shift-based reports.

Configuration of **MA:X** can be managed by end users to easily customise data entry screens to suit your unique situation. The use of powerful database tools assists you by providing a structured, time effective approach to your metallurgical accounting procedures.

Limit introduction of error, improve confidence in your operation, save your people time with **MA:X**.

About Nutava Mining

Nutava Mining develops software solutions for the resources industry. We are a quality team of IT and mining professionals with years of experience in technology development.

Our Consulting team accelerate business transformation for clients, using technology as an enabler. We help businesses provide the right information to the right people at the right time. We take the time to discover the real issues and understand the true business objectives, bringing a pragmatic approach to each project.
