Mine Production Management

Practical and Professional Systems

The **MPX** Mine Production Management System from Nutava Mining is a solution designed to allow the recording, storing and retrieval of mine material movement data, transforming this into meaningful information.

MPX is a modern and robust software product for managing surface and underground mining operations. It provides a lighter and more flexible alternative to highly tailored systems. The benefits include greater efficiency, lower costs and the ability to measure, track and continuously improve the performance of mine site activities, processes, and equipment.

MPX is the logical choice for managers that are interested in moving from home-grown spreadsheets and MS Access databases. The product is scalable to meet the needs of both owner-operated and contractor organisations, handling the most complex organisation structure with ease.

End of month reporting becomes a much easier task when data has been collated in a centralised system, with information available within hours of the end of a month as opposed to the days or weeks it can take.

How does MPX compare to highly tailored systems?

Nutava Mining

MPX meets the needs of most operations "out of the box".

Configuration options ensure the user is presented with only those fields that are relevant

MPX is a cost effective solution which suits the budget of owner-operated projects and contractors

The centralised MPX architecture reduces total cost of ownership and maintenance significantly

MPX allows your team to focus on the project and not the software

MPX provides rapid deployment and implementation options with minimal disruption

MPX is easy to learn and user

New reports can be configured by your administrator

MPX is flexible and allows managers to get the answers to day-to-day questions about productivity issues and downtime

MPX is a mature, stable and reliable tool that operations people can work with efficiently

Transforming data into action

Data and information are paramount for making effective decisions. At Nutava Mining, we understand that most organisations have a lot of data and information stored in various systems, but most find it difficult to make sense of it or take concise action in response to it. MPX transforms your data and information into meaningful knowledge. Our skills in structuring and managing data have been challenged in the toughest situations.

Focus on the project, not the software

The ability to measure the performance of your operations is critical to build and maintain a business advantage

MPX gives you the confidence of up-to-date visibility into:

- Mine to Mill activities
- Stockpiles
- Equipment
- Site specific KPIs

Major business benefits:

- Measure, track and continuously improve operational performance
- Ensure compliance to plan
- Secure data repository
- Low cost of ownership through easy setup and administration
- Reporting: budget/forecast/revised forecast

- Stockpile system that follows accounting principles
- Scalable solution

Benefits for users

- Trouble free end of month reporting
- Easy data editing and validation
- Out-of-the-box solution configured to your needs
- Making sense of mine production data
- Straightforward transition from spreadsheet solutions to MPX

Nutava Mining

About Nutava Mining

Nutava Mining develops software solutions for the resources industry. We are a quality team of IT and mining professionals with years of experience in technology development.

Our Consulting team accelerate business transformation for clients, using technology as an enabler. We help businesses provide the right information to the right people at the right time. We take the time to discover the real issues and understand the true business objectives, bringing a pragmatic approach to each project.
